

YUMII ABB

At only 38 kg and approximately the size of a small human, YuMi® is quickly and easily installed on the production line to work hand-inhand with a human colleague. Lead-through programming means YuMi® can be taught a process by being physically guided through it, eliminating the need for complex, time-consuming code-based instruction. • Can operates equally effectively side-by-side or face-toface with human coworkers. Servo grippers (the "hands") include options for built-in cameras. Real-time algorithms set a collision-free path for each arm customized for the required task. Padding protects coworkers in high-risk areas by absorbing force if contact is made. • If the robot encounters an unexpected object - even a slight contact with a coworker - it can pause its motion within milliseconds, and the motion can be restarted again as easily as pressing play on a remote control. Pinch points have been eliminated or minimized to an acceptable level between moving parts, and between moving and stationary parts.

Key Features

- Workspace radius 560mm
- Programmable through Ethernet IP, Profibus, USB ports, DeviceNet[™], communication port
- Load capacity 500g in the whole workspace

Possible Applications

 Manufacturing tasks: polishing, grinding, assembly, etc.

Access information

Corresponding infrastructure	Commissariat à l'Energie Atomique Interactive Robotics Lab
Location	Plateau de Saclay, Boulevard Thomas Gobert, 91120 Palaiseau, France
Unit of access	Working day
